

Information for activity leader:

- Photocopy this template onto card for the best effect.

You will need:

- Colouring pencils or pens
- Scissors
- String

What to do:

- Colour the grass green and the baby rabbit brown.
- Colour the body of the red kite reddish-brown. Its wings are reddish-brown near the body, turning into a large white patch and then black tips. The tail is black and white.
- Carefully cut out each of the three pieces along the dotted lines.
- Cut one long piece of string. Thread one end through the hole in the grass, so

that you have a short piece of string on one side, and the long piece on the other. Tie a knot to attach the grass to the string.

- Add the baby rabbit and then the red kite further along the piece of string in the same way.

Now you have made a food chain mobile! Baby rabbits eat grass, and red kites eat baby rabbits.

Despite being quite big, red kites are not very strong. They are scavengers, which means they eat lots of different things depending on what they can find, such as worms, voles, rabbits or dead farm animals.

RSPB Wildlife Explorers is the junior membership of the Royal Society for the Protection of Birds.
