Make a log pile

Create a secret world for all the little creatures that come out at night. A pile of logs and branches can give shelter to all sorts of animals, from frogs and newts to many-legged millipedes. And lots of the smaller creatures like nothing better than a meal of rotting wood.

You will need
• Spade
• Logs and branches
• Leaves
• Moss
• Mulch

1 Find a shady spot for your log pile and dig a shallow hole.

2 Pile up the logs in the hole, the biggest at the bottom.

3 Add smaller branches and twigs on top. Drop leaves, moss and mulch in to fill up the spaces in between.
